

[illegible][illegible]

The drawing illustrates the reinforcement details for a reinforced concrete wall section, labeled "Sezione TIPO". It includes five main wall types and a detailed view of the reinforcement layout.

Wall Types and Reinforcement Details:

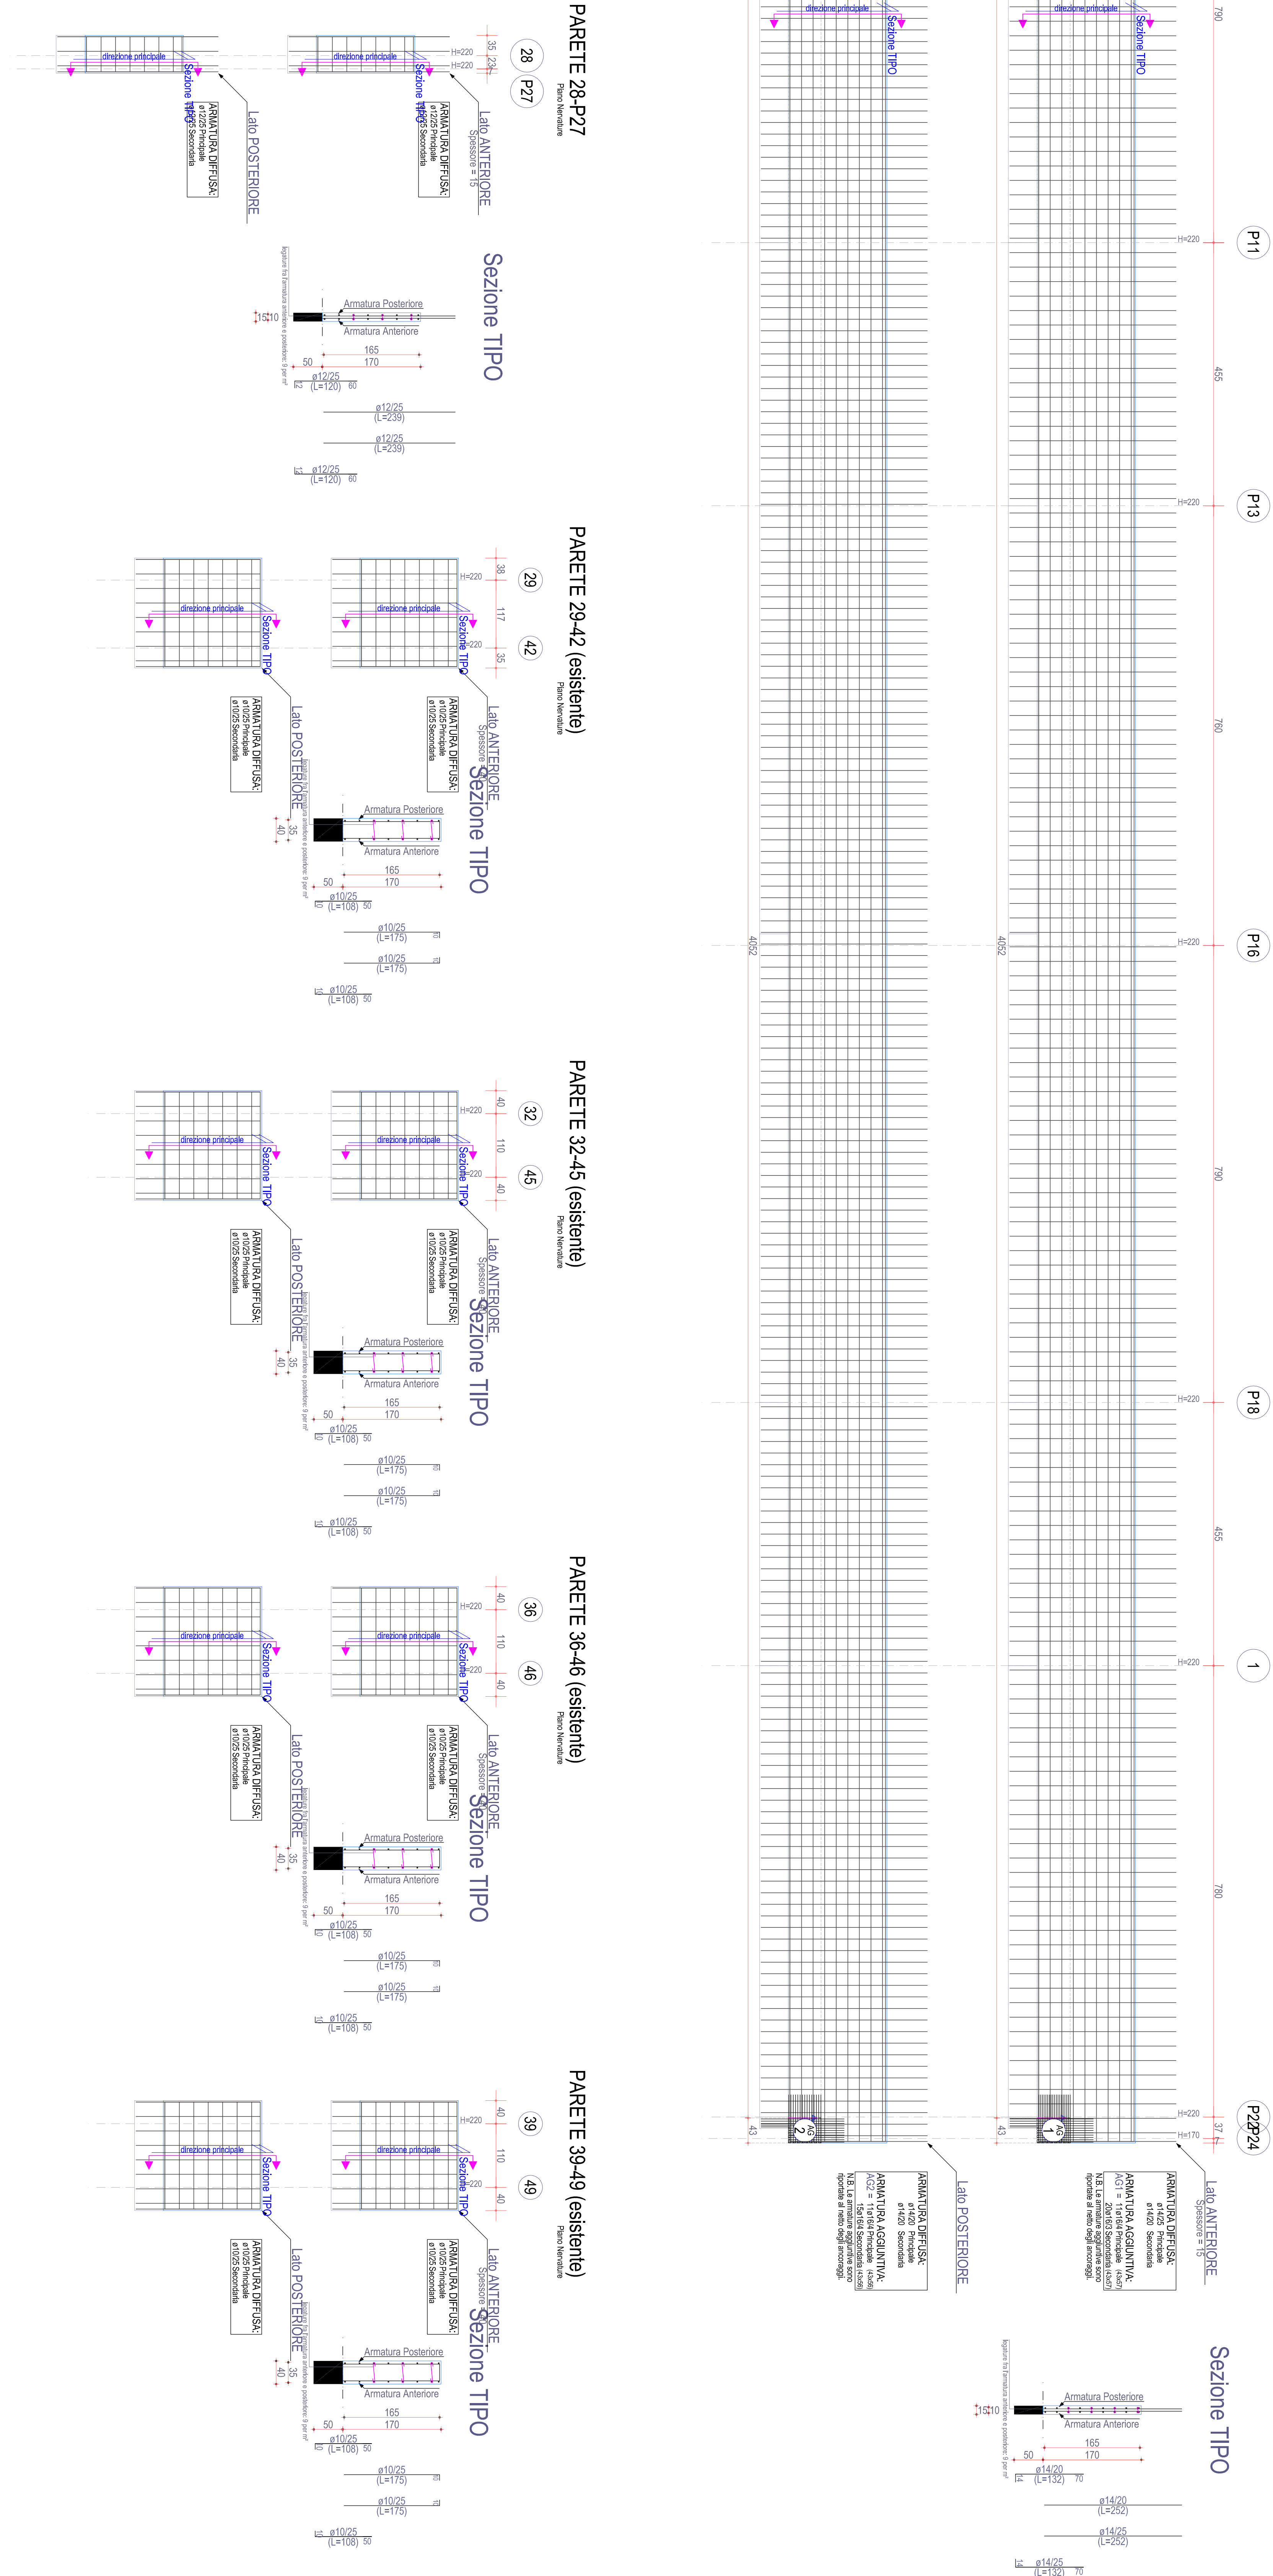

- PARETE 28-P27:** Reinforcement details for the wall section, showing the distribution of reinforcement bars (P27) and the resulting wall thickness (28 cm).
- PARETE 29-42 (esistente):** Reinforcement details for the existing wall section, showing the distribution of reinforcement bars (P27) and the resulting wall thickness (29 cm).
- PARETE 32-45 (esistente):** Reinforcement details for the existing wall section, showing the distribution of reinforcement bars (P27) and the resulting wall thickness (32 cm).
- PARETE 36-46 (esistente):** Reinforcement details for the existing wall section, showing the distribution of reinforcement bars (P27) and the resulting wall thickness (36 cm).
- PARETE 39-49 (esistente):** Reinforcement details for the existing wall section, showing the distribution of reinforcement bars (P27) and the resulting wall thickness (39 cm).

Reinforcement Layout (Sezione TIPO):

The detailed view shows the reinforcement layout for the wall section, including the distribution of reinforcement bars (P27) and the resulting wall thickness (28 cm). It also includes a cross-section of the wall showing the reinforcement bars (P27) and the resulting wall thickness (28 cm).

Legend:

- ARMATURA PERFESSA:** Reinforcement bars (P27) and the resulting wall thickness (28 cm).
- ARMATURA AGGIUNTIVA:** Additional reinforcement bars (P27) and the resulting wall thickness (28 cm).
- ARMATURA AGGIUNTIVA:** Additional reinforcement bars (P27) and the resulting wall thickness (28 cm).
- ARMATURA AGGIUNTIVA:** Additional reinforcement bars (P27) and the resulting wall thickness (28 cm).
- ARMATURA AGGIUNTIVA:** Additional reinforcement bars (P27) and the resulting wall thickness (28 cm).
